

Product Profile - Herbal Gels

Essential Source Gels

Why We Have Moved To Gels

Our present diet is no longer natural. It is full of preservatives, hormones and artificial flavourants and colourants. The use of alcohol and cigarettes, as well as other various flora disrupting chemicals, are added to this already artificial diet. These chemicals cause the disruption of micro-flora in the stomach as well as the digestive tract. Micro-flora is essential for the conversion of certain vitamins and minerals. As a result, whole herbs are not being broken down adequately. Thus taking capsules orally is no longer as effective as it used to be. This excludes vegetarians who are more likely to have an optimum digestive tract.

There are four ways of taking in herbs or their extracts:

Dermally

Injected - intravenously

Sublingually (oral spray)

Orally - absorption through the digestive tract

Our company has selected to opt for a potent dermal application in the form of a gel, with the best available herbs. When used topically there is no competition with stomach acids, alien micro-flora and bacterial overgrowth.

DIRECTIONS

Inflamo-gel: rub onto infected area.

Immuno-gel: rub into high-flow areas.

Alert-Plus: rub onto neck and shoulders.

African-Dream: rub onto the back of the neck.

Derma-restore: rub onto infected area.

Menno-ease: rub onto the inside of arms and thighs (thin skin) alternating areas in a clockwise position per application.

Potency-gel: rub into groin area.

Slimming-gel: rub onto thigh, stomach or buttocks area.

Anti-oxidant gel: can also be used as an anti-wrinkle or skin repair on area desired, or as a general tonic on high-flow areas.

Rub gel onto above areas with fingers in a clockwise direction.

*High-flow areas: back of ankle, sides of torso (body), inside of upper arms and inside of upper leg (thin skin).

Apply to appropriate area as stipulated on the bottle. Full absorption is achieved in 2 to 4 minutes. They should be active in no longer than 11 minutes. The skin should be clean and to assist absorption a clean, damp and warm towel can be applied to the area preceding the application.

One to two squirts - maintenance dose.

Two to four squirts to therapeutic dose.

One squirt to children under six years of age.
